

Liquid Applied Roofing

Acrylabs provides liquid applied roof systems that are comprised of multiple applications of a high-performance acrylic formulation combined with fabric mesh reinforcement. The resulting membrane will be a minimum of 45 dry mils when completed and is totally seamless, fully adhered, self-flashing and highly durable. The membrane is UV resistant and can be renewed, along with the warranty with a single maintenance coat.

- The Acrylabs Roof System can be applied directly to existing roof surfaces
- EPDM (rubber), built-up roofing (hot tar), modified bitumen, concrete and other types of roofing

- Easy to install & user friendly
- Water based
- No need for expensive equipment

- Tired metal roofs are also good candidates for Acrylabs
- Eliminates the need for tear-offs
- Can be brush, roll, or spray applied

- Renewable
- Sustainable
- Reflective
- Waterborne
- Seamless
